Summary

Entry-Level Software Developer with 3+ years of experience building scalable, user-centered web applications using JavaScript, TypeScript, React, Angular, and Node.js. Passionate about writing software that makes a real-world impact, with hands-on experience in healthcare SaaS platforms and modern development methodologies including CI/CD, REST APIs, and component-driven architecture. Currently pursuing an M.S. in IT & Management at Illinois Institute of Technology (GPA: 3.83), specializing in Web Design and Application Development. Eager to join Epic's mission to improve patient care for 325 million patients worldwide by contributing innovative, high-quality software solutions.

Skills

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frameworks: React JS, Angular, Next JS, Vue JS, jQuery, Tailwind CSS, SASS

Backend: Node.js, GraphQL, MongoDB, MySQL, FastAPI

State_management: Redux, RxJS, Vuex, Context API

Tools_and_deploy: Git, GitHub, Postman, Azure App Service, Azure Static Web Apps, Vercel, Render, MongoDB Atlas

Agentic_and_1lm: OpenAI SDK, LangGraph, LangChain, CrewAI, AutoGen, MCP

ML_and_rag: Generative AI, Retrieval Augmented Generation (RAG), Prompt Engineering, Hugging Face Hub, Transformers, Vector Database

Automation_tools: n8n, Make, Zapier

Experience

Front-End Web Developer Intern — AIFS, Naperville, Illinois

Jun 2025 – Aug 2025

- Developed web applications using Blazor and modern JavaScript frameworks, creating responsive, scalable, and user-centered UIs aligned with software development best practices.
- Built SEO-friendly, performance-optimized websites using Astro, applying analytics-driven design principles to improve discoverability and user experience.
- Set up CI/CD pipelines on Azure App Service to automate deployment workflows, streamline development cycles, and ensure production-ready code delivery.
- Collaborated cross-functionally with teams to deliver optimized, maintainable web solutions using modern development methodologies.

Front-End Web Developer — GOWEBEZ, Chennai, India

Mar 2021 – Dec 2023

- Developed and maintained two SaaS platforms in the healthcare (Inflowcare) and education (Language Dynamic Groups) domains, directly impacting end-user workflows and data management.
- Modernized a legacy jQuery application into a scalable React.js architecture using Redux for state management and Tailwind CSS for responsive UI, improving maintainability and performance.
- Built Angular and Vue.js components with Vuex state management and integrated REST APIs with MongoDB and MySQL backends to enable real-time data access and seamless user experiences.
- Applied user-centered design principles and component-driven development to deliver high-quality, production-ready features across multiple product releases.

Projects

Multi-Agent Research Assistant: Built a multi-agent research assistant using role-based agents and LangGraph orchestration, leveraging Hugging Face models for embeddings and summarization and MCP for standardized tool connections — demonstrating machine learning integration and multi-step workflow design.

Tech: CrewAI, LangGraph, MCP, Hugging Face

Agentic Personalized Chatbot with Evaluator Agent: Developed a chatbot using GPT-4o-mini with a Gemini 2.5 evaluator agent to review and improve responses; enabled tool-calling for dynamic queries via external APIs and knowledge sources, showcasing API integration and analytics-driven design.

Tech: OpenAI, Gemini, Tool-Calling

Automation Copilot for SaaS Operations: Designed an automation copilot that inspects and proposes workflows across SaaS platforms using MCP to standardize tool connections and simulate workflows before deployment, reducing operational errors and streamlining processes.

Tech: n8n, MCP

Education

MAS, Information Technology & Management (Web Development) — Illinois Institute of Technology
