Summary

Entry-Level Software Developer with 3+ years of experience building scalable web applications using JavaScript, TypeScript, React.js, and modern front-end frameworks. Passionate about writing software that makes a meaningful impact, with hands-on experience in healthcare SaaS platforms, user-centered design, and full-stack development. Currently pursuing an M.S. in IT & Management at Illinois Institute of Technology (GPA: 3.83), specializing in Web Application Development. Eager to contribute to Epic's mission of improving patient care for 325 million patients worldwide by leveraging modern development methodologies, analytics, and machine learning tools in an innovative, collaborative environment.

Skills

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frameworks: React JS, Next JS, Angular, Vue JS, jQuery, Tailwind CSS, SASS

Backend: Node.js, GraphQL, MongoDB, MySQL, FastAPI

State_management: Redux, RxJS, Vuex, Context API

ML_and_rag: Generative AI, Retrieval Augmented Generation (RAG), Prompt Engineering, Hugging Face Hub, Transformers, Vector Database

Agentic_and_1lm: OpenAI SDK, LangChain, LangGraph, CrewAI, AutoGen, MCP

Tools_and_deploy: Git, GitHub, Postman, Azure App Service, Azure Static Web Apps, Vercel, Render, MongoDB Atlas

Automation_tools: n8n, Make, Zapier

Experience

Front-End Web Developer Intern — AIFS, Naperville, Illinois

Jun 2025 – Aug 2025

- Developed web applications using Blazor and Astro with a focus on responsive, scalable, and user-centered UI design.
- Built SEO-friendly, performance-optimized websites following modern development methodologies and best practices.
- Set up CI/CD pipelines on Azure App Service to automate deployment, streamline development workflows, and improve release reliability.
- Collaborated cross-functionally with teams to deliver production-ready web solutions on schedule.

Front-End Web Developer — GOWEBEZ, Chennai, India

Mar 2021 – Dec 2023

- Engineered features for two SaaS platforms in the healthcare (Inflowcare) and education (Language Dynamic Groups) domains, directly impacting end-user experience and patient-facing workflows.
- Modernized a legacy jQuery application into a scalable React.js architecture using Redux for state management and Tailwind CSS for responsive UI, improving performance and maintainability.
- Built reusable Vue.js components with Vuex and integrated REST APIs with MongoDB and MySQL backends to enable real-time data flow and streamline record sharing across the platform.
- Applied user-centered design principles to deliver intuitive interfaces that reduced friction for healthcare and education end users.

Projects

Multi-Agent Research Assistant: Built a multi-agent research assistant using role-based agents and LangGraph orchestration, leveraging Hugging Face models for embeddings and summarization and MCP for standardized tool connections — demonstrating experience with machine learning tools and multi-step workflow automation.

Tech: CrewAI, LangGraph, MCP, Hugging Face

Agentic Personalized Chatbot with Evaluator Agent: Developed a chatbot using GPT-4o-mini with a Gemini 2.5 evaluator agent to review and improve responses; implemented tool-calling to enable dynamic queries via external APIs and knowledge sources, applying analytics-driven design to enhance software quality.

Tech: OpenAI, Gemini, Tool-Calling

Automation Copilot for SaaS Operations: Created an automation copilot that inspects and proposes workflows across platforms, using MCP to standardize tool connections and simulate workflows before deployment — showcasing ability to streamline operations and reduce manual errors in complex software environments.

Tech: n8n, MCP

Education

MAS, Information Technology & Management (Web Development) — Illinois Institute of Technology
