Summary

Entry-Level Software Developer with 3+ years of experience building scalable web applications using JavaScript, TypeScript, React, and modern development methodologies. Passionate about user-centered design and leveraging analytics and machine learning tools to drive innovation. Experienced in developing SaaS platforms in the healthcare domain, with a strong foundation in full-stack development including Node.js, GraphQL, and RESTful APIs. Currently pursuing an M.S. in IT & Management at Illinois Institute of Technology with a 3.83 GPA, specializing in Web Design and Application Development. Eager to bring software engineering skills to Epic to help build technology that improves patient care and reduces medical errors for 325 million patients worldwide.

Skills

- Languages:** JavaScript, TypeScript, HTML5, CSS3, Python
- Frameworks:** React JS, Next JS, Angular, Vue JS, jQuery, SASS, Tailwind CSS
- Backend:** Node.js, GraphQL, MongoDB, MySQL, FastAPI
- State_management:** Redux, RxJS, Vuex, Context API
- Agentic_and_1lm:** OpenAI SDK, LangChain, LangGraph, CrewAI, AutoGen, MCP
- MI_and_rag:** Generative AI, Retrieval Augmented Generation (RAG), Prompt Engineering, Hugging Face Hub, Transformers, Vector Database
- Tools_and_deploy:** Git, GitHub, Postman, Azure App Service, Azure Static Web Apps, MongoDB Atlas, Vercel, Render
- Automation_tools:** n8n, Make, Zapier

Experience

Front-End Web Developer Intern — AIFS, Naperville, Illinois

Jun 2025 – Aug 2025

- Developed web applications using Blazor and modern JavaScript frameworks, creating responsive, scalable, and user-centered UIs aligned with modern development methodologies.
- Built SEO-friendly, performance-optimized websites using Astro, applying best practices for discoverability and page load efficiency.
- Set up CI/CD pipelines on Azure App Service to automate deployment workflows and streamline the software development lifecycle.
- Collaborated cross-functionally with teams to deliver production-ready web solutions, ensuring code quality and maintainability.

Front-End Web Developer — GOWEBEZ, Chennai, India

Mar 2021 – Dec 2023

- Developed and maintained SaaS platform in the healthcare domain (Inflowcare), building features that directly impacted end-user patient and provider workflows.
- Modernized a legacy jQuery application into a modern React.js architecture with Redux state management and Tailwind CSS, improving performance and developer experience.
- Built Vue.js components with Vuex state management and integrated REST APIs with MongoDB and MySQL backends to support real-time data operations.
- Collaborated with cross-functional teams in an agile environment to deliver scalable, maintainable software across healthcare and education SaaS platforms.

Projects

Multi-Agent Research Assistant: Built a multi-agent research assistant using role-based agents and LangGraph orchestration to automate multi-step workflows; integrated Hugging Face models for embeddings and summarization and used MCP for standardized tool connections, demonstrating machine learning and analytics-driven application development.

Tech: CrewAI, LangGraph, MCP, Hugging Face

Agentic Personalized Chatbot with Evaluator Agent: Designed and developed a chatbot using GPT-4o-mini with a Gemini 2.5 evaluator agent to review and improve response quality; implemented tool-calling for dynamic queries via external APIs and knowledge sources, showcasing user-centered design and AI-driven innovation.

Tech: OpenAI, Gemini, Tool-Calling, TypeScript

Automation Copilot for SaaS Operations: Built an automation copilot that inspects and proposes workflows across SaaS platforms using MCP to standardize tool connections and simulate workflows before deployment, streamlining operational processes and reducing manual errors.

Tech: n8n, MCP, JavaScript

Education

MAS, Information Technology & Management (Web Development) — Illinois Institute of Technology
